
Waluska Project Proposal

The City of Waluska

The City of Waluska wants to provide its community with a safe and reliable water treatment facility. The goal is to protect Waluska's environmental resources and to ensure community values.

Background

To achieve these goals, the city has issued a request for proposal to update the Loon Lake Water Treatment Plant (LLWTP).

Challenges

The city recognizes that meeting its community's water treatment needs requires overcoming numerous challenges. These challenges include

- managing changing regulations and protection standards,
- developing financially responsible treatment services,
- planning land use for community expansion,
- and upholding community values.

Why DesignGlobal?

For all of the above reasons, **DesignGlobal, Inc. (DGI) Engineering** is your best choice. We understand the project scope and recognize your community's needs.

Our Experience

We have worked successfully with your community for a decade, creating feasibility studies for Loon Lake toxic control, developing odor-abatement procedures for your streams and creeks, and assessing your water treatment plant's ability to meet regulatory standards.

Our Team

DGI personnel are not just engineering experts. We are members of your community. Our dynamic project team has a close working relationship with your community's regulatory

agencies. Our Partner in Charge, Julie Schopper, has experience with similar projects worldwide, demonstrated leadership, and the ability to communicate effectively with clients.

Conclusion

DGI offers the City of Waluska an integrated program that addresses all your community's needs. We believe that **DGI** is your best choice to ensure that your community receives a water treatment plant ready to meet the challenges of the twenty-first century.
